

iBot Club Deputy Coordinator Workshop

Phase

Rules and Guidelines Document

Coordinator Team

February 1, 2026

1 Introduction

Welcome to the Workshop Phase. This period is designed to familiarize you with sensor integration, microcontroller boards, and hardware basics. Due to the upcoming Open House and high activity from project teams, strict adherence to the following workspace and hardware rules is mandatory.

2 General Requirements

- **Individual Participation:** This workshop is strictly individual. All tasks, code, and circuit builds must be done by you alone.
- **Bring Your Own Device:** You are required to bring your own laptop with the necessary software (Arduino IDE, etc.) installed.

3 Workspace Booking System

To manage crowd levels in the iBot Workspace, we are implementing a strict slot-booking system via a shared Excel sheet.

- **Booking Method:** You must book your slot in advance using the provided Excel sheet.
- **Duration:** Slots are available daily starting February 1st until the end of the month.
- **Time Slots:** There are three 1-hour slots available each evening:
 - Slot 1: 08:00 PM – 09:00 PM
 - Slot 2: 09:00 PM – 10:00 PM
 - Slot 3: 10:00 PM – 11:00 PM
- **Capacity Limit:** Each slot is capped at a maximum of **10 Deputy Coordinators**. This is to ensure space for project team members working on Open House exhibits.
- **Punctuality:** Stick strictly to your booked time slot. Do not overstay your booking.

4 Hardware Logistics

We have designated a specific location for all workshop components to ensure inventory tracking.

Component Location

All sensors, microcontroller boards, and basic hardware required for the workshop tasks are located in:

The middle drawer of the white cupboard.

(Located to the right of the 3D printer and to the left of the tools cupboard).

Hardware Usage Rules

1. **Shared Pool System:** Hardware is available on a shared pool basis.
 - *Microcontrollers:* There are sufficient Arduino boards for everyone in a slot.
 - *Sensors:* Specific sensors are limited and available on a **first-come, first-served** basis.
2. **Task Management:** If the specific sensor required for your current task is currently in use by another DC, you are expected to switch to a different task immediately. Do not sit idle waiting for components.
3. **Prohibition on Removal:** **Under no circumstances** is hardware allowed to leave the iBot Workspace. All work must be done within the lab during your booked slot.
4. **Return Policy:** All hardware must be returned to the specific drawer mentioned above immediately after your time slot ends. Do not leave components on tables or in other storage areas.

5 Task Submission Guidelines

Each task assigned during this phase must be submitted via the official Google Form. A complete submission requires the following two links:

1. **Code Submission (GitHub):**
 - Create a repository for your work.
 - Upload all relevant code files.
 - Submit the direct link to the repository.
2. **Demonstration (OneDrive):**
 - Record a video showing the working circuit.
 - Include a brief verbal or written explanation of the logic in the video/folder.
 - Upload to OneDrive and submit the shareable link (ensure permissions are set to "Anyone with the link").

Note: Failure to adhere to workspace protocols or missing hardware incidents will be taken seriously. Let's keep the workspace organized for everyone!
